TEN GOLDEN RULES FOR ROAD SAFETY

1. **STOP OR SLOW DOWN** : Allow pedestrians to cross first at uncontrolled zebra crossings.
2. **BUCKLE UP** :So that your family and you are safe in the car. Seat Belts reduce the chances of death of a car occupant in accidents.
3. **OBEY TRAFFIC RULES AND SIGNS** :To prevent road accidents.
4. **OBEY SPEED LIMITS** :For your own safety and that of others. In residential areas and market places, ideal speed should be 20 kmph and the maximum speed limit is 30 kmph.
5. **KEEP VEHICLE FIT** : To prevent breakdown and accidents on road.
6. **NEVER USE MOBILE WHILE DRIVING** :To avoid distractions that largely lead to accidents.
7. **WEAR HELMET** : To protect your head while riding a two wheeler. A good quality helmet reduces the chances of severe head injury.
8. **NEVER DRIVE DANGEROUSLY** :To ensure your own safety and that of other road users.
9. **BE COURTEOUS** : Share the road with all and be considerate. Never rage on the road.
10. **NEVER MIX DRINKING AND DRIVING** : Be Responsible... Don't drink whiledriving.

FOREWORD

It is my privilege to present the annual report of the TRW on "Road Accidents in India – 2015". As in the past, this volume too is an authoritative presentation of relevant data concerning road accidents in the country.

2. Road accidents are now globally recognized as a serious public health problem. The problem is much more serious in our country where close to 5,00,000 road accidents caused nearly 1,46,000 deaths and left more than thrice that number injured. As a signatory to the Brasilia declaration, we are committed to halve the load of fatalities by the year 2020.

3. This Ministry has taken up the mission in all seriousness. Rs. 6 billion have been earmarked during 2016-17 for the remediation of road engineering defects; more than 700 black spots – points with five or more deaths during the previous year have been identified, a road safety audit programme is being grounded, a dedicated institutional structure will be operationalized during this year itself and a slew of legislative amendments in the Central Motor Vehicles Act have been planned through the aegis of the Group of Transport Ministers to strengthen the enforcement aspect.

4. The Hon'ble Minister has written to the individual MPs in whose constituencies the black spots have been identified, seeking their involvement and cooperation. Efforts are being made to incorporate road safety issues in school curricula. A country-wise NGO support group has been set up. A comprehensive programme for enhanced driver training is being rolled out. Almost all States have established nodal agencies for this purpose.

5. Much more needs to be done. The Ministry and the TRW would appreciate if this compilation is used to analyze the trends and to evolve clear-cut policy responses.

EXECUTIVE SUMMARY

1. India is a signatory to Brasilia Declaration and is committed to reduce the number of road accidents and fatalities by 50 per cent by 2020.
2. However, with one of the highest motorization growth rate in the world accompanied by rapid expansion in road network and urbanization over the years, our country is faced with serious impacts on road safety levels.
3. The total number of road accidents increased by 2.5 per cent from 4,89,400 in 2014 to 5,01,423 in 2015. The total number of persons killed in road accidents increased by 4.6 per cent from 1,39,671 in 2014 to 1,46,133 in 2015. Road accident injuries have also increased by 1.4 per cent from 4,93,474 in 2014 to 5,00,279 in 2015. The severity of road accidents, measured in terms of number of persons killed per 100 accidents has increased from 28.5 in 2014 to 29.1 in 2015.
4. The analysis of road accident data 2015 reveals that about 1,374 accidents and 400 deaths take place every day on Indian roads which further translates into 57 accidents and loss of 17 lives on an average every hour in our country.
5. About 54.1 per cent of all persons killed in road accidents are in the 15 - 34 years age group during the year 2015.

Section I: Accidents on Indian Roads - 2015

1. Introduction

Road accidents are an outcome of the interplay of various factors, some of which are the length of road network, vehicle population, human population and adherence/enforcement of road safety regulations etc. Road accident causes injuries, fatalities, disabilities and hospitalization with severe socio economic costs across the country. Consequently, road safety has become an issue of concern both at national and international level. The United Nations has rightly proclaimed 2011-20 as the Decade of Action on Road Safety. India is also signatory to Brasilia Declaration and is committed to reduce the number of road accidents and fatalities by 50 per cent by 2020.

2. Recent Trends

The total number of road accidents increased by 2.5 per cent from 4,89,400 in 2014 to 5,01,423 in 2015. The total number of persons killed increased by 4.6 per cent from 1,39,671 in 2014 to 1,46,133 in 2015. Road accident injuries have also increased by 1.4 per cent from 4,93,474 in 2014 to 5,00,279 in 2015. Accident severity (number of persons killed per 100 accidents) has gone up from 28.5 in 2014 to 29.1 in 2015. The analysis of road accident data 2015 reveals that about 1374 accidents and 400 deaths take place every day on Indian roads. It further reveals that 57 accidents take place and 17 lives are lost every hour on an average in road accidents in our country. A comparative scenario of 2014 and 2015 is depicted in Table 1.1.

Table 1.1 : Road Accident Parameters: 2014 and 2015			
Parameter	2014	2015	% change over previous year
Total Accidents in the country	4,89,400	5,01,423	2.5
Total number of Persons Killed in the country	1,39,671	1,46,133	4.6
Total number of Persons Injured in the country	4,93,474	5,00,279	1.4
Accident Severity*	28.5	29.1	2.1
* No. of persons killed per 100 accidents			

The total number of road accidents per lakh population increased in the country from 39.5 in 2014 to 40.0 in 2015. Similarly number of persons killed and injured per lakh population also increased from 11.3 to 11.7 per cent and 39.8 to 39.9 respectively in 2015.

3. Long-term Trends

The Compound Annual Growth Rate (CAGR) of number of road accidents as well as the number of persons injured in the country during the decades 1994 -2004 and 2005-2015 declined from 2.8 per cent to 1.3 per cent and from 4.1 per cent to 0.7 per cent respectively. However, the CAGR in respect of the number of road accident fatalities, increased from 3.7 per cent to 4.4 per cent during the same period. This is depicted in Chart 1.1 .

4. Profile of Road Accidents

During 2015, a total of 5,01,423 road accidents were reported by all States/Union Territories. Of these 26.3 per cent (1,31,726) were fatal accidents. The number of persons killed in road accidents were 1,46,133 i.e an average of one fatality per 3.4 accidents. The number of road accidents, road accident fatalities and persons injured in road accidents in India during 2005 to 2015 is shown in Table 1.2 and also depicted in Chart 1.2.

 Figures within parentheses indicate share of fatal accidents to total accidents.
 * Accident Severity : Number of persons killed per 100 accidents

It is clear from Table 1.2 that over the years 2005 to 2015, total number of road accidents, killings and injuries have increased by 14.2 per cent, 53.9 per cent and 7.5 per cent respectively. The number of road accident killings have been increased alarmingly over the years 2005 to 2015. The proportion of fatal accidents in total road accidents has consistently increased since 2005 from 19.0 per cent to 26.3 per cent in 2015. The severity of road accidents, measured in terms of persons killed per 100 accidents has also increased from 21.6 to 29.1 in 2015.

A detailed State/UT wise analysis of (a) number of accidents, number of persons killed and injured ; (b) share of each state in total number of road accidents; (c) number of accidents per lakh population; (d) number of accidents per ten thousand motor vehicles and (e) per ten thousand kilometers of road length are given at Annexures III, IV and V respectively.

Section II: Normalized Indicators of Road Accidents, Injuries & Fatalities: All India Averages

To get an appropriate measure of incidence of accidents, normalized/standardized accident rates for India have been worked out in terms of number of road accidents, killings and injuries (a) per lakh persons, (b) per ten thousand motor vehicles and (c) per ten thousand kilometers of the road length. Some of the broad trends at the all-India level are summarized below.

- a. Chart 2.1 indicates the increase in the number of accidents per lakh population from 21.2 in 1970 to 22.8 in 1980 followed by a sharp increase in 1990 to 33.8. Between 2000 and 2005, the figures fluctuated in the range of 38.6 to 40.1 ; increasing to above 42 (2007 and 2008); a slight dip to 41.9 in 2009 followed by a rise to 42.5 in 2010. Between 1970 and 2010, number of accidents per lakh population increased by more than 2 times . Between 2011 to 2014 there was a decline from 41.1 in 2011 to 39.5 in 2014 with a marginal increase in 2015 to 40 (details at Annexure-I).

- b. A significant decline in the number of accidents per ten thousand motor vehicles is discernible from 814 in 1970 to about 27 in 2013. This is depicted in Chart 2.2.

- c. The trend in the number of accidents per ten thousand kilometers of the road length shows that the number of accidents increased from 960 in 1970 to 1,027 in 1980; peaked to 1,424 in 1990; but declined thereafter fluctuating within a band of 1177 to 930 per ten thousand kilometers from 2000 to 2013. This is shown in Chart 2.3.

- d. The number of persons injured per lakh population increased more than three folds from 13.0 in 1970 to 44.8 in 2010. However, there was a decline from 42.3 to 39.8 during 2011 to 2014, but again marginally increased to 39.9 in 2015.
- e. The number of Persons killed per lakh population increased four fold from 2.7 in 1970 to 11.8 in 2011, fluctuating between 11.8 to 11.7 during the period 2012 to 2015. This is depicted in Chart 2.4. Exposure of population to road accidents leading to deaths and

injuries largely depend on the amount of travel undertaken, number of trips, the distance travelled, or time in the road environment, number of motor vehicles and the amount of motorized traffic, etc.

- f. There has been a dramatic decline in the number of persons injured and killed per 10,000 vehicles. The number of persons injured per 10,000 vehicles plummeted from 500 in 1970 to about 27 in 2013. It is noteworthy that this parameter has consistently declined since 1996 despite sustained high growth in vehicle population. Similarly, the number of persons killed per 10,000 vehicles in the country also fell from about 104 in 1970 to less than 8 in 2013 as shown in Chart 2.5.

- g. The number of persons killed per ten thousand km of road length has more than doubled since 1970. The design of modern road system exposes vulnerable road users to greater risk of accidents. Lack of foot-paths, cycle tracks, traffic calming measures to reduce speed where non motorized mode of transport blend with motorized traffic, increases the risk of accidents and its severity. These factors have contributed towards increase in road related accidents, injuries and deaths in relation to rise in terms of road length. The numbers of persons injured per ten thousand km of road length rose from 590 in 1970 to 1,283 in 2004, declined from 1,279 in 2006 to 946 in 2013. Similarly persons killed per ten thousand km of road length more than doubled from 122 in 1970 to 305 in 2011 and declined in 2012 from 284 to 263 in 2013 as shown in Chart 2.6. However, both these parameters have undergone ups and downs over the last decade.

Section V: Road Accidents, Deaths, Injuries and Severity in Million Plus Cities

Out of the 53 Million Plus cities, 50 Million Plus cities reported road accident data for 2015. For the first time in two consecutive years, i.e. 2014 and 2015, there was a decline in the number of road accidents, the number of persons killed and the number of persons injured in road accidents in Million plus Cities. These 50 Million Plus Cities accounted for a share of 22.1 per cent in total road accidents in the country during 2015 as against 22.7 percent in 2014. During 2015, in Million Plus Cities 11.3 per cent persons were killed in road accidents as against 11.9 percent in 2014. Whereas, 16.4 per cent persons were injured in road accidents in the country during 2015 as against 16.8 percent in 2014. This is indicated in Table 5.1. Million Plus city wise details are given in Table - 5.2.

An important accident related parameter is the extent of accident severity (road accident related deaths per 100 accidents). It varies from a low of 2.6 per cent in Mumbai to a high of 66.0 per cent in Amritsar (Table 5.2). The other cities which reported a very high accident severity included Ludhiana (55.4 per cent), Varanasi (47.9 per cent), Asansol - Durgapur (47.1 per cent), Allahabad (47.0 per cent), and Jamshedpur (45.2 per cent). This is depicted in Chart 5.1.

An illustrative table indicating the total number of accidents, persons killed and injured with details of grievous injuries, minor injuries and non-injuries in the 50 Million plus cities is at Annexure ó XLIII.

Section VI: Accidents, Deaths and Injuries in terms of Classification of Roads

National Highways accounted for a share of 28.4 per cent in total road accidents and 35.0 per cent in total number of persons killed in road accidents during 2015. The State Highways accounted for a share of 24.0 per cent of total accidents and 28.0 per cent in the total number of persons killed in road accidents during same period of time . The detailed share of accidents , deaths and injury are illustrated in Tables 6.1 and 6.2.

Whereas Other Roads accounted for highest share of 47.6 per cent in total road accidents and 37.0 per cent in total number of persons killed in road accidents during 2015. State- wise break up of accidents, injuries and fatalities due to road accidents on different stretches of National Highways, State Highways and Other Roads in India are given in Annexures ó XII to XVIII.

Chart 6.1 depicts the percentage share of accidents, persons killed and injured as per road classification during the calendar year 2015.

The above Table reveals that as compared with the previous year i.e 2014 , road accident has gone up on National Highways from 28.2 per cent to 28.4 per cent in 2015. The matter of concern is that persons killed on National Highways has also gone up from 34.1 per cent in 2014 to 35.0 per cent in 2015. Only the share of road accident injuries has marginally reduced from 29.9 per cent in 2014 to 29.1 per cent in 2015.

Section IX: Spatial Distribution of Road Accidents (Urban vis-à-vis Rural)

An analysis of road accidents in urban and rural areas for the calendar year 2015 reveals that rural areas are more prone to accidents. The total number of road accidents in urban areas were lower (2,31,894) as compared to number of accidents in rural areas (2,69,529). The percentage share of accidents in rural areas and urban areas were 53.8 and 46.2 respectively in total number of accidents in the country. A comparison of percentage share of fatal accidents, total accidents, persons killed and injured in rural vis-à-vis urban is illustrated in table 9.1. The table indicates that significant improvement in rural infrastructure is required for reducing accidents in rural areas. Detailed State/UT-wise information on the spatial distribution of road accidents rural as well as urban is illustrated in Annexure X. 2. National Road Safety Policy

Based on the globally accepted multi-pronged strategy and the safe-system approach for improving road safety, the National Road Safety Policy outlines the initiatives to be taken by the Government at all levels. The policy is outlined as under: -

I. Preamble

The Government of India is deeply concerned about the growth in the number of road accidents, injuries and fatalities in recent years. It recognizes that road accidents have now become a major public health issue, and the victims are mainly the poor and vulnerable road users.

2. The Government of India further recognizes that as road accidents involve roads, motor vehicles as also the human beings, road safety needs to be addressed on a holistic basis. It also recognizes that regardless of jurisdictions, the Central and State Governments have a joint responsibility in reducing the incidence of road accidents, injuries and fatalities.

3. In the light of this, the Government of India, through this National Road Safety Policy, states its commitment to bring about a significant reduction in mortality and morbidity resulting from road accidents.

II. Policy Statements

In order to achieve a significant improvement in road safety, the Government of India is committed to:

(i) Raise Awareness about Road Safety Issues

The Government would increase its efforts to promote awareness about the various aspects of road safety, the social and economic implications of road accidents and what needs to be done to curb the rising menace of road accidents. This would enable and empower the different stakeholders to play a meaningful role in promoting road safety.

(ii) Establish a Road Safety Information Database

The Government will provide assistance to local bodies, Union Territories and States to improve the quality of crash investigation and of data collection, transmission and analysis. A National Road Safety Information System will be established for providing continuity and policy guidelines to this activity.

(iii) Ensure Safer Road Infrastructure

The Government will take measures to review standards pertaining to safety in the design of rural and urban roads and bring them in consonance with international best practices keeping in view Indian traffic conditions. Continuing application of Intelligent Transport Systems (ITS) under a national framework to establish a safe and efficient transport system will be encouraged.

(iv) Safer Vehicles

The Government will take steps to ensure that safety features are built in at the stage of design, manufacture, usage, operation and maintenance of both motorized and non-motorized vehicles in line with international standards and practices in order to minimize adverse safety and environmental effects of vehicle operation on road users (including pedestrians and bicyclists) and infrastructure.

(v) Safer Drivers

The Government will strengthen the system of driver licensing and training to improve the competence and capability of drivers.

(vi) Safety of Vulnerable Road Users

The design and construction of all road facilities (rural and urban) will take into account the needs of non-motorized transport and the vulnerable and physically challenged in an appropriate manner. The Government will seek to disseminate best practices in this regard to town planners, architects, and highway and traffic engineers.

- (iii) Ranchi to Rargaon to Mahulia stretch of NH No. 33. (Implemented by ICICI Lombard General Insurance Company during September 2014 to 09.03.2016)

The project envisages transport of accident victims from the accident scene to hospital and, where required, from one hospital to another for treatment at a public or private hospital for the first 48 hours or Rs. 30,000/-, whichever is earlier so that lives of accident victims by providing prompt and appropriate medical care during "Golden Hour" may be saved.

The pilot project will provide guidance in working out a proper pan-India scheme. Based on the findings of the pilot project, the scheme for cashless treatment to road accident victims would be finalized for country-wide roll out. The experience and data gathered during the pilot project will provide:

- ◆ Likely average cost of treatment for (A) simple injuries (B) serious injuries.
- ◆ Modalities of treatment and of meeting expenses if the accident victim is not fit for discharge after 48 hours.
- ◆ Size of the fund required to be established by MoRT&H

In case of Gurgaon-Jaipur stretch, on an average an ALS ambulance takes 8 minutes to reach the road accident victims and 18 to 19 minutes are required to drop the victims to the nearest empanelled hospital. BLS ambulance takes 3 minutes to reach the victims and 13 minutes are required to drop the accident victims to the nearest hospital. Till February 2016, 9869 accidents were attended which includes 12,738 accident victims. The average expenditure on one road accident victims is around Rs. 13,500/-.

In case of Ranchi - Mahulia Stretch of NH-33, average time taken by a patient to reach the hospital is still 43 minutes because of uneven distribution of hospitals. Till February 2016, 784 accidents were attended which includes 1283 accident victims. The average expenditure on one road accident victims is around Rs. 11,500/-.
